Harrison Adili

SYSTEMS-MINDED PRODUCT DESIGNER

Lagos, Nigeria (Open to Remote) · adilisomto2022@gmail.com · +234 814 572 1769 · linkedin.com/in/adili-harrison · harrisonadili.netlify.app

SUMMARY

Product Designer with approximately 3 years of combined experience across product design and front-end development, including 17 months in dedicated product design roles spanning Healthcare, Enterprise SaaS, Fintech, Civic Tech, and early-stage products. Works from problem framing through information architecture and interaction design to implementation-ready Figma handoff, partnering with engineering and business stakeholders along the way. Recent systems work: a role-aware ICU command centre that cuts a bed-status update from 4–5 clicks to 2 (countable in the open Figma file); a GRC compliance SaaS platform restructured for enterprise auditors; a fintech portfolio redesign that moves the trade action above the fold; and a federal financial-aid redesign that replaces optional tooltips with guidance naming the exact tax-form line. Builds systems engineers can trust: a 3-tier token architecture spanning 184 components, with every colour pair verified against WCAG 2.2 AA programmatically rather than by eye. The portfolio projects are self-directed concept work and are not yet validated with users.

EXPERIENCE

Evu · *Product Design Intern (Part-time)* — New York, NY, USA · Jul 2025 – Present

- —Redesigned core user flows to cut task-completion friction, prioritizing the steps with highest user drop-off.
- —Restructured multi-step flows into clearer, logic-driven journeys, reducing decision points along the way.
- —Delivered full-state Figma prototypes (hover, error, empty, loading) so engineering could build without clarification cycles.

Mitiget · *Product Designer (NYSC Placement)* — Lagos, Nigeria · May 2025 – Mar 2026

- —Led design for a B2B GRC compliance SaaS platform, from wireframes through developer handoff, coordinating with engineering on feasibility.
- —Restructured dashboard Information Architecture to reduce navigation complexity for enterprise auditors' multi-step compliance workflows.
- —Audited the full design system against WCAG 2.1 AA, documenting accessibility gaps for engineering remediation.

Agri-verse · *Founder & Product Designer (Solo, Self-Paced)* — Lagos, Nigeria · Jan 2025 – Present

- —Founded and led all product design, 0-to-1, from concept through a working design system.
- —Built a reusable design system and design tokens across surfaces to support fast, consistent solo iteration.
- —Aligned UI decisions with business goals and investor-facing messaging, balancing quality against founder time constraints.

Independent · *Freelance Designer & Front-End Developer* — Remote · Jan 2023 – May 2024

- —Delivered 10+ client projects — landing pages, marketing sites, responsive builds — managing scope directly with each client.
- —Earned repeat business from roughly half of all clients engaged.
- —Owned full project cycles in Figma, HTML, CSS, and JavaScript, from brief through deployed site.

SYSTEMS ARCHITECTURE PORTFOLIO

Self-directed practice projects exploring systems design across industries — not client engagements. Each links to an open case study and Figma file.

MedTrack · Healthcare · ICU Command Center

- —Designed a bed-status update flow that cuts the interaction path from 4–5 clicks to 2 in a safety-critical, time-pressured workflow — countable in the open Figma file. Concept project, not yet user-tested.

MindBridge · Mental Health · AI Companion

- —Redesigned onboarding so a mood check-in replaces account creation as the first interaction — five screens to value reduced to one. 14 hi-fi screens with full crisis-flow coverage.

Stride · Token-Based Design System

- —Built a 3-tier token cascade — Primitive → Semantic → Component — across 184 components, enabling theme changes with zero component-level edits.
- —Verified every token colour pair against WCAG 2.2 AA programmatically rather than by eye — a method that caught a contrast failure in my own published palette, which I then corrected.

Robinhood · Fintech · Portfolio & Trading Flows

- —Rebuilt the portfolio information hierarchy around the decision sequence — cut a 60% viewport chart to 48px per-row sparklines, moving the trade action above the fold on entry.

Arbiter · Enterprise Workflow · Decision Management

- —Replaced a FIFO queue with a non-reorderable composite-priority score (SLA proximity, case complexity, requestor tier), with the weighting and every component score exposed in the interface.

FAFSA · Civic Tech · Federal Aid Application

- —Replaced optional tooltips with guidance that opens on field focus across the 22 of 38 fields that assume tax literacy — each naming the exact 1040 line rather than restating the term.

SKILLS

Product & UX: Product Design · UX Design · Interaction Design · Information Architecture · Journey Mapping · Wireframing · Prototyping · Edge-Case Design · Heuristic Evaluation · Competitive Teardown · Design Critique

Systems & Collaboration: Design Systems · Design Tokens · Component Libraries · Accessibility (WCAG 2.1/2.2 AA) · Responsive Breakpoints · Cross-Functional Collaboration · Stakeholder Management · Developer Handoff · Design Governance

Tools: Figma (Advanced) · FigJam · Framer · AI-Assisted Design Workflows (Claude) · CapCut · HTML · CSS · JavaScript

EDUCATION & CREDENTIALS

Chukwuemeka Odumegwu Ojukwu University (COOU) · B.Sc. Sociology · Nov 2016 – Feb 2021

- —CPISM (Certified Professional) — Aptech Computer Institute, Lagos, Nigeria · Jul 2024 – Dec 2024
- —NYSC Certificate of National Service — Federal Republic of Nigeria · Apr 2026

Languages: English (Fluent, Professional) · Igbo (Native) · Yoruba (Conversational)
